BSc.Computer Security

Education

NSBM Green University | 2022-2026
BSC(honors) In Computer Security

- GPA: expecting 3.0 - 3.5
- Languages - C#, HTML, CSS, Java, Python, Dart
- Skills - Android app development, Network and security basics(for now), Innovative ideas and projects, Customer handling and creativity

Aquinas College Of Higher Studies | 2022-2023
BEIT Course

- Office workspace training
- English diploma level 1, level 2

Work experience

IT Intern / Head of Digital Marketing & Creative Visualizer | Since 2023
Moshi Moshi Nippon (PVT) Ltd

- Led the complete digital transformation of the company, including website design, development, deployment, and SEO optimization.
- Managed digital marketing strategies across social media platforms, improving online visibility and brand reach.
- Designed creative visual content, branding assets, and promotional materials aligned with company identity.
- Implemented technical solutions for hosting, domain management, analytics, and performance optimization.
- Coordinated marketing campaigns for Japan visa consultation services, focusing on user engagement and lead generation.
- Provided IT support, system maintenance, and digital workflow improvements across the organization.

Network Design Engineer (Academic Project) | 2025
NSBM Green University – Computer Networks Module

- Designed a scalable network infrastructure for a Bank Network using Cisco Packet Tracer
- Configured routers, switches, and subnets using static routing and flat IP addressing
- Implemented VLANs and IP addressing schemes for multiple departments, ensuring efficient segmentation and also subnetting and IP addressing.
- Created a detailed report and configuration script for submission and presentation

Skills

- **Technical Skills**

Proficient in AI-powered content creation using tools such as ChatGPT, Copy.ai, Jasper, MidJourney, and Canva AI. Experienced in developing digital marketing strategies, managing social media campaigns, and optimizing content for SEO and SEM using Google Analytics, Google Search Console, and Ahrefs. Skilled in content planning, copywriting, branding, and marketing automation through platforms like Hootsuite, Buffer, and Later, as well as running paid advertising campaigns on Facebook Ads and Google Ads. Capable of building and customizing web pages and landing pages using HTML, CSS, WordPress, and Elementor, alongside executing email marketing campaigns with Mailchimp and Sendinblue. Proficient in Canva, CapCut, Adobe Photoshop (basic), and Figma, with a foundational understanding of Python for marketing automation.

- **Personal Skills**

Strong storytelling and creative concept development abilities, with expertise in trend research and audience engagement. Highly adaptable, detail-oriented, and committed to delivering results. Possess excellent problem-solving skills, time management, and the ability to think critically and strategically.

- **Social Skills**

Effective communicator with strong presentation skills, able to collaborate with cross-functional teams and manage influencer outreach and partnerships. Skilled in negotiation, client relationship management, and maintaining cultural awareness to ensure brand messaging aligns with diverse audiences.

- **Languages**

English (Professional Proficiency), Sinhala (Native), Tamil (Basic)

Other Projects

- **AI-Driven Social Media Content Hub –** Designed and executed a multi-platform content marketing strategy for a fictional eco-friendly fashion brand, using AI tools like ChatGPT and MidJourney to generate captions, blog posts, and ad creatives. Managed a 3-month campaign that hypothetically boosted engagement by 180% and follower growth by 65%.
- **Viral Campaign for "BrewBuddy" Coffee App –** Created a brand launch strategy for a mock coffee ordering app, including AI-generated promotional videos, influencer outreach plans, and a targeted paid ads campaign. Leveraged Canva AI and CapCut to produce aesthetic short-form videos tailored for TikTok and Instagram Reels.
- **SEO Optimization for "FitNest" Wellness Blog –** Developed a content plan for a fictional wellness blog using keyword research tools (Ahrefs, Google Search Console) to identify high-traffic topics. Generated long-form articles and infographics using AI, hypothetically increasing organic traffic by 120% in 4 months.
- **AI-Powered Email Marketing Automation –** Built an email funnel for a hypothetical online course platform using Mailchimp automation and ChatGPT-assisted copywriting. Designed engaging newsletters, automated drip sequences, and personalized product recommendations, achieving an imagined open rate of 45% and a click-through rate of 12%.

Final Year Project Idea

NuroNest Lock (The next level of file-based security and use)

Problem Statement

Small and medium-sized organizations increasingly rely on digital files to manage sensitive information such as examination papers, attendance systems, legal documents, and internal records. Although standard encryption tools protect files at rest, they fail to prevent contextual misuse after decryption, allowing authorized users to copy, leak, or access data outside trusted environments. Web-based systems are further limited by their inability to securely auto-detect critical system attributes such as device identity, Wi-Fi network details, and physical location, making them unsuitable for high-security scenarios like online examinations or controlled QR-based attendance systems.

Proposed Solution

NuroNest Lock addresses this gap by introducing a context-aware, Zero Trust file encryption system delivered as a desktop application. The system encrypts files using AES-256-GCM and binds decryption to predefined conditions such as device UUID matching, trusted Wi-Fi networks, location validation, time-based access windows, and password authentication. Built using Electron.js, React, and a secure Node.js/C# backend, the application enables reliable auto-detection of system-level parameters unavailable to traditional web platforms. This approach ensures files can only be accessed within authorized contexts, making it suitable for secure exam distribution, QR attendance systems, and enterprise-level sensitive data handling, while remaining lightweight and cost-effective.
